Abstract: This study examines the crashworthiness performance of the octagonal thin wall tube, based on numerical simulation. The purpose is to find the optimal design with the lowest weight and best crashworthiness parameters in order to protect the passengers’ life. Octagonal members with various trigger mechanisms (circular, square and elliptical triggers) with different distributions from the free end of tube were compared with mild steel A36 tube of 2 mm wall thickness, filled with hollow aluminium foam. The filled steel tube has given better results by enhancing the energy absorption by 15% and 36.8 in case of direct and oblique impact respectively. While The better result has given by enhancing CFE by 30% and 9.9% in case of direct and oblique impact respectively.

Keywords: direct and oblique impact load, thin wall, energy absorption, CFE, Trigger and aluminum foam

In this paper we offer a historical overview of Double Data Rate (DDR) memory being play a key role in the development of computer with also who passed him in addition to the basics of their work and develop in the future.

**Paper Title:** Design and Performance of Photo Voltaic Pumping System

**Abstract:** Energy in general and electrical energy in particular is not only at the center of sustainable development, but also at the center of development itself. Thus Energy is critical for sustainable development because it is not only necessary for economic development, but also because this necessity drives societies towards environmentally unsound energy use and could severely compromise the planet itself. With steep increase in the supply – demand gap of energy, the shortage of energy has become global problem. With seemingly poor trend of capacity increase, the burden of importing energy is increasing particularly for India in the south Asian countries. Now it has become essential to opt for alternative sources of energy. Use of solar energy in all the sectors is one of the feasible options. Electric pumps can be conveniently replaced by solar PV pumps. The initiative needs very less investment and will power. In this paper, an effort has been made to show the effectiveness of PV solar pump in place of a conventional electric pump in industry.

**Paper Title:** Electrode position and Characterization of Copper Oxide Thin Films for Solar Cell Applications

**Abstract:** Copper oxide thin films are being considered in thin film solar cells for its unique photovoltaic properties. Electrodeposition is one of the cheapest processes to deposit copper oxide thin films. In this study, copper oxide was electrodeposited on the copper substrate in an electrolyte bath containing 0.2M CuSO4.5H2O, 3M lactic acid and NaOH. A Potentiostat /Galvanostat with silver chloride electrode (Ag/AgCl) as a reference electrode was used for electrodeposition. During deposition, the bath temperature and pH were maintained at 600C and 12-12.5 respectively. Copper oxide was deposited at different potentials and deposition time. The films deposited at different electrode position conditions were characterized by Scanning Electron Microscopy (SEM), Energy-dispersive X-ray spectroscopy (EDS) and UV Spectrometer. From visual inspection it was found that copper oxide film is black and adherent on copper substrate. The SEM study revealed that copper oxide films became more compact and grain sizes of copper oxide films decreased at more negative potentials in deposition potential range. EDS analysis showed that percentage of oxygen in the copper oxide films increased with more negative potentials at the deposition potential range. It was found that with increase of time more adherent and uniform film
The variation of current density and thickness of copper oxide films with different deposition parameters were analyzed. The absorption spectrums which represent the optical properties were also correlated with the deposition parameters.

**Keywords:** Copper oxide; Electrodeposition; Solar cell; Film thickness; Optical absorbance.
